My name is Isha Savaliya. I am an engineering student studying at Marwadi University in ICT department. My interest is in software domain. I done internship at Bizzyatora on Laravel and flutter. in this i developed website and mobile applications. I also developed project on PHP also. My goal is to grow into a software developer and get a good job. I also work on APIs, database.

My name is **Isha Savaliya**, and I am currently pursuing a **Bachelor's degree in Information and Communication Technology.** I chose this field because of my strong curiosity about how software systems work and how technology can be used to solve real-world problems. My academic journey has helped me build a solid foundation in programming, system design, and application development.

My educational background has given me exposure to both theoretical concepts and practical implementation. Through coursework and projects, I have gained experience in **software development, database management, and application architecture.** I have worked on several hands-on projects that strengthened my understanding of backend logic, frontend interfaces, and mobile application workflows. These experiences have helped me develop analytical thinking, problem-solving skills, and a structured approach to development.

My primary goal is to grow into a skilled and reliable **software developer** who can design efficient, scalable, and user-focused applications. I aim to continuously improve my technical abilities while also developing a strong understanding of software quality, performance, and usability. In the long term, I aspire to contribute to meaningful projects that create a positive impact through technology.

I have a strong interest in **software development and application design**, especially in building complete systems rather than isolated components. I enjoy working on projects that involve real-world use cases, logical problem-solving, and continuous improvement. Along with development, I am interested in learning about **data analysis, machine learning concepts, and research-based approaches** that emphasize clarity and interpretability.

Technology plays a central role in my learning and growth. I have practical experience with tools and frameworks such as **Laravel for backend development, Flutter for cross-platform mobile applications**, and **Android Jetpack Compose for native Android development.** I also work with APIs, databases, and version control systems to build structured and maintainable software solutions. I am always eager to explore new technologies and improve my skills to keep pace with the evolving software industry.
