

MARWADI UNIVERSITY

Faculty of Technology

Information and Communication Technology

B.Tech

SEM: VI

Mid Sem Exam

Enroll. No. _____

April 2024

Subject: - Artificial Intelligence (01CT0616)

Date:- 10/04/2024

Total Marks:-30

Time: - 50 minutes

Note:

1. All questions are compulsory
2. Marks on the right indicates the total marks of the question

1. A dataset is usually divided into training set and _____ set.

Answer: testing set

2. In unsupervised learning, data is _____.

Answer: unlabeled

3. Clustering is a type of _____ learning.

Answer: unsupervised learning

4. The most commonly used clustering algorithm is _____.

Answer: K-means

5. Overfitting occurs when a model performs well on training data but poorly on _____ data.

Answer: testing data

6. A decision tree is a _____ learning algorithm.

Answer: supervised learning

7. The full form of NLP is _____.

Answer: Natural Language Processing

8. Reinforcement learning uses _____ to learn from the environment.

Answer: rewards

9. The measure of correctness of a model is called _____.

Answer: accuracy

10. Deep Learning is based on _____ networks.

Answer: neural networks

11. The brain-inspired model used in AI is called _____.

Answer: Artificial Neural Network

12. The input layer, hidden layer, and output layer are parts of a _____ network.

Answer: neural

13. The process of adjusting weights in neural networks is called _____.

Answer: training

14. Gradient Descent is used to minimize the _____ function.
Answer: Loss
15. The algorithm that mimics human decision-making is _____ tree.
Answer: decision
16. In ML, features are also known as _____ variables.
Answer: independent
17. The output variable is also known as _____ variable.
Answer: dependent
18. The full form of CNN is _____.
Answer: Convolutional Neural Network
19. Image recognition is a common application of _____.
Answer: computer vision
20. The process of converting raw data into useful form is called _____.
Answer: data preprocessing
21. Bias and variance are related to model _____.
Answer: performance
22. The term "epoch" refers to one complete pass through the _____ dataset.
Answer: training
23. The function used to introduce non-linearity in neural networks is called _____ function.
Answer: activation
24. The library commonly used for ML in Python is _____.
Answer: Scikit-learn
25. The goal of AI is to create systems that can _____ and make decisions.
Answer: learn
